Montecito TV Console Assembly

Your console may be a different size or style but assembly is the same.

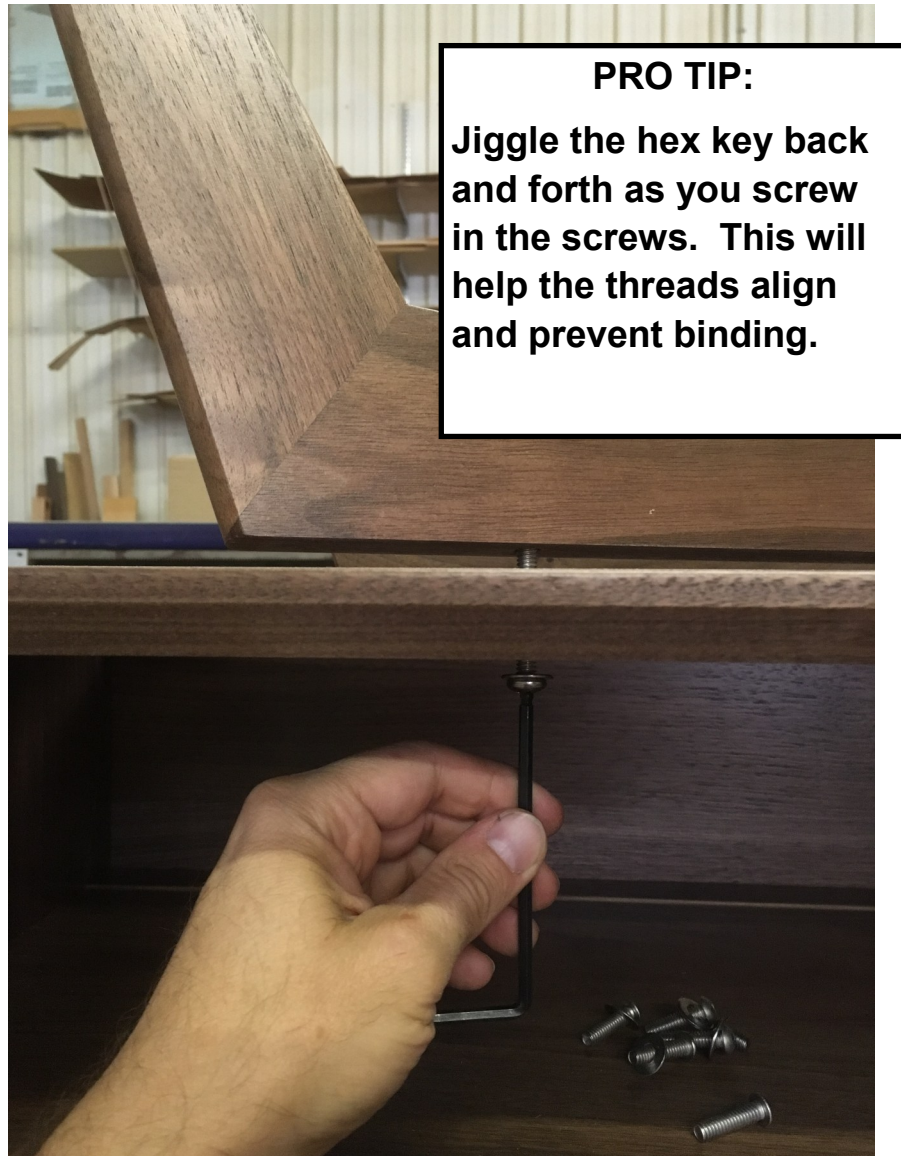

1. After unpacking, lay the console body upside-down (holes facing up) on a blanket or soft surface:

2. Place the legs in line with the holes in the console body:

3. Attach the legs by inserting the screws (with washers) through the holes in the console body and threading them into the threaded inserts in the legs. Keep each screw a little loose until all of the screws have been threaded into each leg. Then tighten all of the screws firmly using the hex key supplied.

Carefully flip the console upright.

4. Please see this video on how to install the doors:
